RECIRCULATOR SYSTEM™

- NEW!**
- Matrix II Microprocessor™ Control Panel
 - Patented By-Pass Flow Control Technology

RVS Corporation, Bryan, TX.

Since its founding in 1983, Refrigeration Valves and Systems Corporation (RVS) has become the customer preferred supplier of innovative industrial refrigeration products including factory assembled, packaged recirculation systems and ASME pressure vessels of all types and sizes.

Pressure vessels and recirculator packages are manufactured to ASME requirements in the modern Bryan, Texas facility. With over 100,000 square feet of manufacturing area, (10) overhead cranes, state of the art plasma cutting, plate rolling and welding equipment, RVS has the capacity to handle all types of ASME pressure vessel and vessel package requirements.

From the smallest pressure vessel to the largest packages, RVS is committed to providing superior technical support and the highest quality products with fast, on-time shipments.

RVS was acquired by EVAPCO, Inc. in 1994 as a wholly owned subsidiary. EVAPCO is recognized as the leading supplier of innovative and high quality heat transfer equipment to the Industrial Refrigeration, HVAC, Process Cooling and Power Industries. The success of EVAPCO/RVS has been the result of a continual commitment to product innovation and improvement, quality workmanship, and a dedication to providing unparalleled customer service and satisfaction.

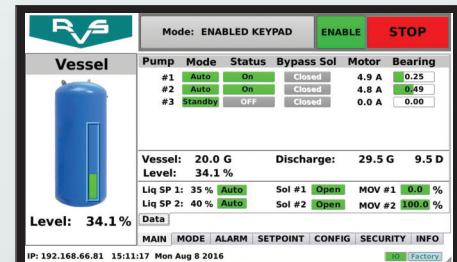

EVAPCO/RVS's powerful combination of financial strength and technical expertise has established the company as a recognized manufacturer of market-leading products on a worldwide basis. EVAPCO/RVS is an employee owned company with a dedicated team committed to excellence.

MRP Recirculator System

The MRP Recirculator System utilizes the highest quality and most advanced components available in the industry and features the Matrix II Microprocessor™ Control Panel. The Matrix II has been engineered by RVS to provide total recirculator control including liquid feed and level control, pump protection, pump bearing wear monitoring, and RVS's patented pump bypass flow control (U.S. Patent No. 7,437,880). The MRP Recirculator System with Matrix II is state of the art and confidently backed by RVS with an **EXCLUSIVE and COMPREHENSIVE 3-YEAR WARRANTY!**

Matrix II Microprocessor™ Control Panel Features and Benefits:

- Faster processing speed and color HMI touch screen display!
- Control and protection for up to six pumps plus a transfer pump!
- Integrated pump bearing wear monitor on the display screen with safety cutouts and alarms!
- Patented pump bypass flow control!
- Pump differential pressure and current monitoring with safety cutouts and alarms!
- Automatic operation of pumps and proportional liquid feed or solenoid valves!
- Digital liquid level display on screen and high/low level monitoring with safety cutouts and alarms!
- External communication and remote monitoring!
- Factory wired, packaged, and tested – simple, ready to go installation with single point power connection! See RVS Bulletin 590 for more information on Matrix II!

Matrix II Display

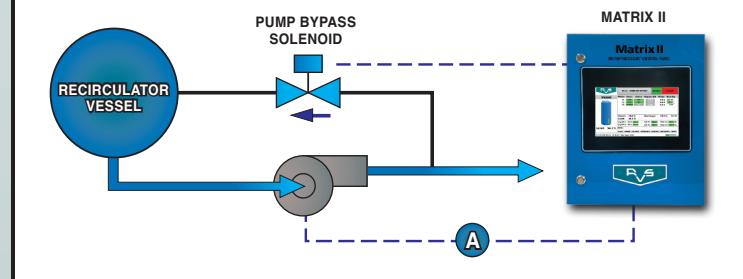

Matrix II Panel Eliminates...

- Level Controllers
- Proportional Feed Valve Controllers
- Differential Pressure Switches
- Pump Protection Devices
- PLC Programming
- Control Wiring in the Field

Patented Pump Bypass Flow Control

U.S. Patent No. 7,437,880

- Matrix II monitors pump flow and opens bypass only when necessary due to low flow conditions
- Eliminates the need to size the pump for continuous bypass flow
- More efficient operation requiring smaller, lower horsepower pumps

Standard Vessel Design

- ASME, 250 psig, with dual vapor relief assembly
- National Board registration
- Stainless steel nameplate bracket and standoff to prevent corrosion
- Vertical or horizontal vessel configuration in 24" to 144" outside diameter range
- Internally routed minimum bypass flow, motor cooling, oil pot vent and relief line piping reduces insulation cost and potential for shipping damage.

Liquid Level Column

- Level indicating column with valves, level eyes, frost shields, and oil drain
- Cable type, electronic level probe as standard
- High level shutdown float switch for compressor protection

Proportional Liquid Feed Assembly (Not Shown)

- Modulating valve minimizes pressure surges and protects pumps from cavitation
- Backup solenoid valve provides positive shutoff in the event of a power failure
- Can be configured as a single or dual liquid feed assembly

Oil Pot

- ASME, 400 psig, with single, replaceable, cartridge style vapor relief assembly
- Relief discharge piped internal to the main vessel
- Optional dual relief assembly and/or relief to atmosphere

Teikoku Pumps

- World's largest manufacturer of hermetic pumps
- Exclusive bearing wear monitor at the pump and on the Matrix II display screen
- Secondary containment system eliminates leaks to atmosphere
- Low NPSH with capacities from 55-480 gpm in 460 or 575 volt service CSA
- Motor cooling and individual pump minimum flow bypass lines piped internal to the main vessel

Teikoku Pumps—Standard

Finish

- Vessel hydrostatically or pneumatically pressure tested
- Factory package piping welded and tested in accordance with ASME B31.5
- Surface prepped to SSPC-SP6 and painted with high quality macropoxy primer
- Entire assembly is evacuated to eliminate moisture and shipped with 15 psi dry nitrogen charge
- Exclusive and comprehensive 3 year warranty when equipped with the Matrix II Microprocessor Control Panel

Options

- 300, 350 and up to 580 psig design rating
- Corrosion allowance on vessel shell and heads, and/or nozzles
- Post Weld Heat Treatment (PWHT)
- SA333 Grade 6 Low temperature pipe
- 1.5 kw Oil pot heater
- Radiography of pipe welds
- Seismic design calculations
- Conventional on/off solenoid and hand expansion liquid feed assembly (single or dual)
- Electromechanical control panel with starters and disconnects

SELECTION PROCEDURE

STEP 1: From Table 1A or 1B, select a model with a capacity equal to or greater than the required capacity at the given saturated suction temperature.

STEP 2: From Table 2A or 2B, check the available surge volume for the model selected against the required system surge volume. If the available surge volume is inadequate, select the next larger model with sufficient surge volume (or contact the factory).

STEP 3: From Table 3, convert tons of refrigeration to gpm.

STEP 4: From Table 4, select the pumps with sufficient gpm capacity and pump differential.

STEP 5: From Tables 5-8, select the RVS Liquid Feed Assembly (LFA) model number.

For LFA's with Motorized valves, refer to the "A" Tables arranged by liquid feed temperature - either High Temperature, +95°F (Tables 5A or 6A) or Low Temperature, +35°F (Tables 7A or 8A) based on preferred brand (either Danfoss or Hansen).

For LFA's with Hand Expansion (HX) valves, refer to the "B" Tables arranged as noted above.

WHEN ORDERING PLEASE SPECIFY:

Recirculator model number and pump. Please include required capacity in tons of refrigeration, saturated suction temperature, recirculation rate, surge volume, liquid feed temperature, voltage/frequency, and liquid feed assembly (LFA) model number.

RVS-375-45-22.7	375	45	22.7	66
RVS-480-45-22.7	480	45	22.7	66
RVS-160-70-16	160	70	16	45

Note: Maximum GPM is the pump capacity available to the system when using the Matrix II Microprocessor™ Control Panel. If the Matrix II is not used, subtract the minimum flow from the maximum gpm to get system gpm.

TRG Monitor on the Pump

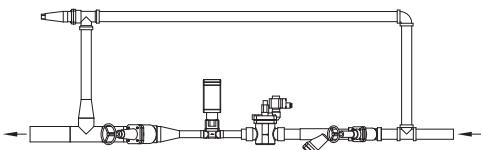

Bearing Wear Monitoring on the Matrix II

RVS has selected a complete line of low NPSH Teikoku pumps for industrial refrigeration service. Teikoku is the world's largest manufacturer of sealless, canned (hermetic) pumps. The pumps are manufactured of 304 Stainless Steel with 300 Class ANSI flanges and include a secondary containment system which prevents any leakage to atmosphere. The pumps also feature a patented TRG monitor to measure bearing wear and rotation. When supplied with the Matrix II, the bearing wear monitoring system is simultaneously displayed on the easy to see and access color HMI touch screen. The Matrix II provides continuous monitoring along with bearing wear safety cutouts, auto pump switching, and alarms.

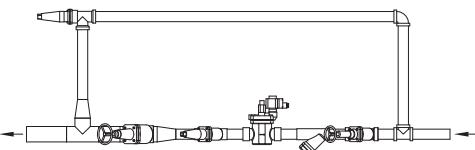

RVS LIQUID FEED ASSEMBLY (LFA)

Single Liquid Feed Assembly (LFA) with Motorized Valve

Liquid Feed Assembly (factory assembled) includes a motorized valve, solenoid valve (120 volt), strainer (flanges added for Hansen - not shown), two globe shut-off valves, and one angle hand expansion bypass valve.

Single Liquid Feed Assembly (LFA) with Hand Expansion Valve (HX)

Liquid Feed Assembly (factory assembled) includes a hand expansion valve, a solenoid valve (120 volt), strainer (flanges added for Hansen - not shown), two globe shut-off valves, and one angle hand expansion bypass valve.
